HOW TO LAY NOVOTURF ARTIFICIAL GRASS

1 Prepare your garden

- Remove all turf, veg patches and surrounding rocks down to the bare earth

Remove enough soil to add a 25-40mm layer of sharp sand

Use a weed killer to kill weeds down to the roots

Use a turf cutter to make turf removal much easier

2 Installing sub base and weed membrane

- A 25-40 mm Sub base of sand is installed

Nail or peg the weed membrane to the sand sub base

In some cases you may need to use a treated wooden border

Compress the area with a plate compactor, great for small areas

During dry conditions wet the sub base a day before installation

3 Installing the grass

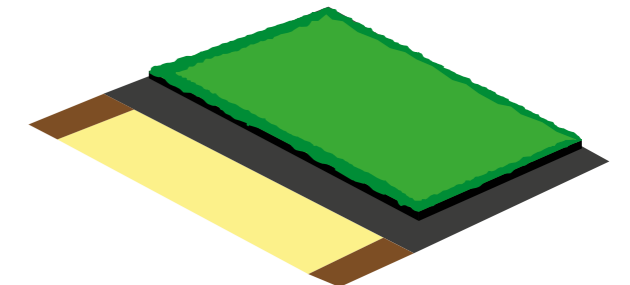

- Roll out the grass. All rolls will have a directional pile, please ensure that all the rolls are laid out in the same direction

* If joining grass

Cut carefully into the backing and trim the artificial grass

Fix with adhesive or stainless screws to treated wooden timber edging or with stainless steel nails into the sub base

4 Joining the grass

- Seaming tape is then used to join the cut rolls together
- Roll out the seaming tape along the seam line, ensuring equal laid centrally along the seam
- Before applying the adhesive, fix the seaming tape to the sub base with stainless steel nails
